With Gizmos like Limiting Reactants and Equilibrium and Concentration, students are more able to visualize what is happening with the specific molecules in the reaction. Ms. Ringler explains, “In the Equilibrium and Concentration Gizmo, the students are able to see how some of the products of the original reaction break down to reform the reactants. Traditionally, this has been hard to represent on a larger scale so that they can compare quantities.

Recently we published two new Gizmos which directly address the topic in the field of chemistry: Equilibrium and Concentration and Equilibrium and Pressure. Both Gizmos explore reversible chemical reactions. In a reversible reaction, the rates of the forward and reverse reactions depend on the concentrations of reactants and products. As the forward reaction proceeds, the concentration of products increases. This causes the rate of the reverse reaction to increase as the forward reaction slows.
