In probability theory, although simple examples illustrate that linear uncorrelatedness of two random variables does not in general imply their independence, it is sometimes mistakenly thought that it does imply that when the two random variables are normally distributed. This article demonstrates

TABLES OF P-VALUES FOR t- AND CHI-SQUARE REFERENCE

An important area of statistical practice involves determination of P-values when performing significance testing. If the null reference distribution is standard normal, then many standard statistical texts provide a table of probabilities that may be used to determine the P-value; examples include Casella and Berger (1990), Hogg and Tanis (2001), Iman (1994),
