Since the probability of  $A \cup B$  is obtained as the sum of the probability values of the outcomes within these three (mutually exclusive) events, the following result is obtained:  $P(A \cup B) = P(A \cap B) + P(A \cap B) + P(A \cap B)$  This equality can be presented in another form using the relationships  $P(A \cap B) = P(A) - P(A \cap B)$  and  $P(A \cap B) = P(B) - P(A \cap B)$  Substituting in these expressions for  $P(A \cap B)$  and  $P(A \cap B)$  gives the following result:  $P(A \cup B) = P(A) + P(B) - P \dots$

Probability Probability implies 'likelihood' or 'chance'. When an event is certain to happen then the probability of occurrence of that event is 1 and when it is certain that the event cannot happen then the probability of that event is 0. Hence the value of probability ranges from 0 to 1.
